We have redefined the standard
DNS plus The Future is now!

A development that never stops

The future has begun! We are presenting the new generation of our universal screws with double-thread and cutters for faster troublefree working.

But the most prominent feature is in the screws' "inheritance": DNS stands for the new standard that has integrated every further innovation and optimisation of the quality, geometry and the logistical and organisational possibilities firmly in the programme.

Clear advantages

The DNS double-thread in comparison with traditional chipboard screws
40% greater overwind torque
50% time saving when screwing in, therefore
50% energy saving, i.e. 50% longer service life for the rechargeable screwdriver

- Greater fracture torque
- Greater bending angle
- Clearly reduced screwing in resistance
- Optimised slanted cutting ribs
- Longer cutting edge
- Cutting effect of the thread through DNS cutters
- Finish: zinc plated yellow or zinc plated blue
- Patented
