## For your terrace floor **Hardwood screw** in stainless steel A4 thermic antique finish

### For corrosion-resistant connections

The hardwood screw is the optimal solution for corrosion-resistant screw connection of tropical hardwoods. The screws are made of A4 stainless steel, the antique surface is of a brown colour that matches the wood.

The screw has a small head of max. 8 mm.

Possible dimensions:

5,5 x 45/50/60/70 and 80.

For assembly of tropical hardwoods, the entire length must be predrilled by means of a 4 mm drill, in order to reduce the screw-in resistance into the wood, thus avoiding splintering of the wood. The lubrication serves to further reduce the screw-in resistance.

The screw head ought to be sunk after assembly, in order to avoid abrasion as a result of mechanical impact. The surface colour itself is permanently maintained.

The cutting ribs support perfect fitting.
